SUMMARY

Software developer with over 5 years of combined experience in application development, automated testing, and enterprise IT support. Skilled in C++, C#, Oracle PL/SQL, and web application development with Agile delivery. Built production-grade test frameworks in C# and C++ at Canada Life. Holds an active federal Reliability Security Clearance and a Computer Programming Diploma from Algonquin College.

EXPERIENCE

Software Developer

Sept 2023 – Jan 2026

Canada Life

Remote

- Developed application features and automated test frameworks in C# and TypeScript using MS Visual Studio and Git, writing 50+ test cases across functional, regression, and integration scenarios within an Agile/Scrum team, cutting manual testing effort by 40%.
- Wrote Oracle PL/SQL queries to set up test data and validate records directly against the database, catching data-level defects that UI testing alone would have missed.
- Built C# and C++ automation utilities that handled repetitive test setup and verification steps, which the team reused across regression cycles to save time each release.
- Ran test suites across web and React Native mobile apps (iOS and Android), reproducing defects and tracing root causes alongside developers to cut average resolution time by 35%.
- Added the automated test suite as a stage in the team CI/CD pipeline so tests ran on every build, working with services running in Docker and Kubernetes, and supported an internal SAP HRMS application by validating its payroll and administrative functions.

Help Desk Analyst

June 2018 – Aug 2022

Bell Canada

Ottawa, ON

- Delivered bilingual (English/French) IT support to 2,000+ employees across Windows 10/11 and Microsoft 365 (Active Directory, Exchange, SharePoint), consistently meeting SLA targets.
- Managed incidents and change records using enterprise service management platforms (HP Service Centre, Remedy, CWA), producing major outage reports and contributing to post-incident analysis and process improvements that reduced repeat incidents.

PROJECTS

BidSense AI Cost-Estimation Platform | *Python, PyTorch, scikit-learn, C++, FastAPI, PostgreSQL, Docker, Kubernetes, AWS*

- Built an ML pipeline in Python with scikit-learn to predict construction cost and timeline overruns, framing it as a regression problem and comparing several models to choose the most accurate, and prototyped a PyTorch neural network to benchmark against the simpler models.
- Moved the heaviest feature-encoding work into a C++ preprocessing module to cut pipeline processing time by roughly 30%, and served predictions through a FastAPI endpoint containerized with Docker and deployed to AWS, tracking model versions per client in PostgreSQL.

ClearVision AI Basketball Analytics Platform | *React, TypeScript, C#, .NET, LangChain, RAG, Vector DB, PostgreSQL, AWS*

- Built a full-stack AI analytics app (React/TypeScript frontend, C# .NET backend) that generates scouting reports by retrieving the most relevant game data and passing it to an LLM so the output stays grounded in real stats, a retrieval-augmented (RAG) approach built with LangChain and a vector database, with API keys kept server-side.
- Designed typed React components and validated the LLM JSON output against a schema so the interface always rendered consistent, well-formed reports, and deployed the application on AWS.

EDUCATION

Carleton University

2022 – 2025

Computer Science (AI/ML Specialization)

Algonquin College

Graduated

Computer Programming Diploma, GPA: 3.6/4.0

TECHNICAL SKILLS

Languages: Python, C++, C#, Java, TypeScript, JavaScript, SQL

AI/ML & LLMs: PyTorch, TensorFlow, scikit-learn, RAG, Vector Databases, LangChain, LLM APIs, NLP

Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, CI/CD, Git

Databases & Web: PostgreSQL, Oracle PL/SQL, MongoDB, REST APIs, React, Next.js, FastAPI, Node.js
